

The current status of the gravitational wave detector KAGRA

Wednesday, 15 July 2026 17:20 (20 minutes)

KAGRA is a 3 km cryogenic, underground laser interferometric gravitational-wave detector in Kamioka, Japan, and a member of the international LIGO–Virgo–KAGRA network. This talk reviews KAGRA's performance and contribution during the fourth observing run (O4).

Presenter: OSHINO, Shoichi (ICRR)

Session Classification: Session 6
